- Will train the right applicant.

### **CNC SWISS SCREW MACHINE SETUP/PROGRAMMER NEEDED**

Years of Experience: Minimum 7 years.

Description: We are looking to add a highly motivated and experienced CNC Swiss Screw Machine Programmer to our team.

Duties include:

- Creates programs utilized by the Swiss machines for the machining sequence of part production.
- Creates item documentation, such as, set-up sheets, offset sheets, program files, and any electronic note files required for each item.
- Performs first run set-up and test runs in the development of new or redesigned parts.
- Applies changes in processes, equipment, or machine and tool components in the ongoing continuous improvement process.
- Assists department personnel in problem solving.
- Trains department personnel in set-up or operation functions.
- Works with vendors for new equipment purchases or tool design requirements.
- Works with the department manager to establish costs for product or equipment.
- Identifies cost saving possibilities and develops requirements and experiments to initiate changes.
- Develops new parts processes.
- Responsible for machine maintenance either personally or indirectly.
- Applicants must have experience in engineering drawing interpretation, GD&T and use of inspection gages, devices, and equipment. MasterCam experience desired (but any programming software experience will be considered)

If you think you would fit into our team, please reply via email with application form or resume.
